

Locomotive Exhaust Arm

This solution is particularly suitable for high suction power of 10.000 m³/h. The swivelling range of the arm is 180° with a length of approx. 6,00m. The exhaust hood at the suction car is able to move lengthwise to the exhaust rail and vertical. So every exhaust pipe is reachable.

Suction Arm with Double Exhaust Rail AS 590

Optionally the equipment with a remote control or an controllable fan is possible.
